

Keep Loudoun Beautiful

Everybody should keep Loudoun beautiful by recycling, composting, not polluting, cleaning-up, ecology, and beautification.

Everyone should recycle because it's one of the easiest things to do. Instead of throwing away paper, recycle it. When you see three arrows facing each other in a circle throw it in that.

You can compost if you have soil, food you don't want to eat, and a bin of any size. Put the soil in the bin, after that put the food in the soil and mix it all up. Over the days if you find some worms put the worms in the bin with the soil and food.

Don't pollute. If you're going to a neighbor's house right next door don't drive, walk. Another way to stop pollution is to not cut down trees. If you cut down trees it makes it harder to breath.

Another easy thing is cleaning-up not your room or house, your neighborhood or a park near your house. Just pick up bottles, trash, and anything that's not supposed to be there. That's more help than you thought or think, but it's keeping the Earth beautiful.

This you see a lot, its ecology. Ecology is plants and animals. Plants have beautiful flowers which makes the Earth beautiful. Animals are also a huge part of nature. Animals are cute, and complete earth along with us. By cleaning-up we save ecology.

By doing all of this we create beautification. Beautification is just making things beautiful. Flowers and animals are part of beautification. One big part of beautification is nature. By recycling, composting, not polluting, cleaning-up, and ecology we create beautification. All of these things lead to a beautiful country.
